ABSTRACT: Twenty-nine volatile substances of ten frozen mushrooms (*Grifola frondosa*, *Clitocybe nebularis*, *Clitocybe odora*, *Tricholoma sulfureum*, *Agaricus bisporus*, *Amanita ovoidea*, *Clitopilus prunulus*, *Hebeloma radicosum*, *Pholiota apicrea*, *Boletus satanas*, Basidiomycetes) from France have been identified by GC/MS. The main components of the fruit bodies were 1-octen-3-ol, benzaldehyde, 2-phenylethanol, (E,E)-2,4-decadienal and (E,Z)-2,4-decadienal. Lysidine, δ -cadinene, cis-sabinene hydrate and trans-sabinene hydrate were identified for the first time in mushrooms.
